Designing and constructing a variant of Streptoverticillium mobaraense-originated transglutaminase (MTG), for use in food processing, comprises estimating the binding site of MTG based on its stereo-structure.

Matsui H;

WPI; 2001-266172/27

```
The present invention describes a method for designing and constructing a variant transglutaminase by estimating the binding site of Streptoverticillium mobaraense-originated transglutaminase (MTG) to the substrate based on the stereo-structure obtained by X-ray analysis of the crystalline structure of MTG crystals, and e.g. substituting amino acid crystalline structure of MTG crystals, and e.g. substituting amino acid. The method can be used for designing and constructing a variant transglutaminase. The obtained transglutaminases can be used in food activity and thermal stability, substrate-specificity and an less required optimum pH. The present sequence represents a transglutaminase isolated from Streptoverticillium mobaraense (also called Streptomyces

Seguro K; Miwa T, Yokoyama K, Nakamura N,

WPI; 1999-062664/06. N-PSDB; AAV81508 New microbial transglutaminase with N-terminal aspartic acid deleted -allowing high level recombinant production without added methionine in E. coli, useful in production of gelled foods, cosmetics etc.

The present invention describes a method for producing active transglutaminase from denatured enzyme. The method comprises: (i) forming an intermediate structure of the enzyme having transglutaminase activity under acidic conditions in an aqueous medium; and (ii) forming a higherlevel structure of the enzyme having transglutaminase activity under neutral conditions in an aqueous medium. The method can be used for industrial production of active transglutaminase from denatured material (such as recombinant transglutaminase) which can be used in the food industry for the production of gelled foods such as jellies, yoghurts and

Production of active transglutaminase from denatured enzyme by two-stage refolding process for industrial production of active enzyme for use in food production.

Example 1; Page 18-23; 56pp; English.

The present sequence is encoded by the high expression transglutaminase gene present in plasmid pTRPMTG-02. The gene is derived from

```
Streptoverticillium sp., and is codon altered, using oligonucleotides dANUB151-60, for expression in Escherichia coli. The specification describes a new microbial transglutaminase that has the N-terminal aspartic acid of transglutaminase deleted. Eliminating the N-terminal from microbial transglutaminase deleted. Eliminating the N-terminal by from microbial transglutaminase allows efficient removal of the terminal hap from microbial transglutaminase allows efficient removal of the terminal hap set residue added when the protein is expressed in B. coli. The E. coli methionine aminopeptidase acts well on Met-Ser but only poorly on Met-Ser, so problems of antigenicity associated with Met-terminated proteins are avoided. Recombinant transglutaminase is used to produce gelled foods (jellies, yogurt and cheeses) or cosmetics, to improve the quality of meat, in the production of materials for microcapsules of high thermal stability and as a carrier for immobilised enzymes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Transglutaminase; gelled food; jelly; yoghurt; gelled cosmetic; cheese.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method for designing and constructing a variant transglutaminase by estimating the binding site of Streptoversticillium mobaraense-originated transglutaminase (MTG) to the substrate based on the stereo-structure obtained by X-ray analysis of the crystalline structure of MTG crystals, and e.g. substituting amino acid crystalline structure at the substrate-binding site of the transglutaminase. The method can be used for designing and constructing a variant transglutaminase. The obtained transglutaminases can be used in food
for the production of gelled cosmetics. The present sequence transglutaminase which is used in the exemplification from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Designing and constructing a variant of Streptoverticillium mobaraense-
originated transglutaminase (MTG), for use in food processing, comprises
estimating the binding site of MTG based on its stereo-structure.

that Ag is converted to crosslinked products. The pAg has virucide, antiparasitic, cytostatic, nootropic and neuroprotective activities, and can be used in vaccines. The method is neuroprotective activities, and can be used in vaccines. The method is useful in preparing immunogenic compositions, using disease-specific compounds optionally modified to include a (I)-reactive amino acid that are combined in crosslinking solution then treated with (I), that can be used as vaccines. PAg, and other related antigenic compositions, are useful in human and veterinary medicine, particularly as vaccines, for treatment and prevention of infections (viral, bacterial, fungal or parasitic), cancers and Alzheimer's disease, also of immune-related or autoimmune diseases. Antibodies against PAg are useful as diagnostic reagents and crosslinked proteins can also be used industrially, e.g. in food or leather processing, in cosmetics and as enzyme carriers. The present sequence represents a Erreptomyces mobaraensis transglutaminase (EC 2.3.2.13), which is used in an example from the present invention.
crosslinking solution with a biological agent (I); and (ii) incubating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bacterial transglutaminase; BTG; expression; active; inactive;

The method comprises: (i) treating an antigen (Ag) in a crosslinking solution with a biological agent (I); and (ii) incubating so that Ag is converted to crosslinked products. The pAg has vincide, antibacterial, fungicide, antiparasitic, cytostatic, nootropic and

neuroprotective activities, and can be used in vaccines. The method is useful in preparing immunogenic compositions, using disease-specific compounds optionally modified to include a (1) reactive amino acid that are combined in crosslinking solution then treated with (1), that can be useful in human and veterinary medicine, particularly as vaccines, are useful in human and veterinary medicine, particularly as vaccines, for treatment and prevention of infections (viral, bacterial, fungal or parasitic), cancers and Alzheimer's disease, also of immune-related or autoimmune diseases. Antibodies against pAg are useful as diagnostic reagents and crosslinked proteins can also be used industrially, e.g. in food or leather processing, in cosmetics and as enzyme carriers. The present sequence represents a Streptomyces mobaraensis recombinant 6X-His transgluteminase (EC 2.3.2.13) fusion protein, which is used in an example from the present invention. Sequence 355 AA; 8

New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity

Claim 20; SEQ ID NO 52571; 103pp; English.

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used

```
in diagnostics as expressed sequence tags for identifying expressed

crosses. (I) is useful in gene therapy techniques to restore normal

crosseful in or to treat disease states involving (II). (II) is

useful for generating antibodies against it, detecting or quantitating a

conseful for generating antibodies against it, detecting or quantitating a

The mature transglutaminase enzyme (BTG) can be derived from two different species. Streptoverticillium and Actinomycetes. It catalyses an acyl rearrangement reaction of a gamma-carboxymaide gp. of glutamine. It introduces intra- or intermolecular formation of epsilon-(gamma-Gln)-Lys cross-linking when an epsilon-amino gp. of a Lys residue acts as an acyl conversion of Gln residues to Glu residues by deamination. The enzyme is used in the prodn. of gelled foods, gelled cosmetics, yogurt, gelatin, cheese etc. It is also used in the prodn. of thermally stable materials sequence given allows the prodn. of BTG efficiently and in large quantity. (Updated on 25-MAR-2003 to correct PA field.) (Updated on 25-MAR-2003 to correct PA field.)
PnJ1053-BTG, for protein expression.

Momose H; Taguchi S,

WPI; 2001-300330/31. N-PSDB; AAH20188 Streptomyces sp. carrying an actinomycete-derived gene and promoter for producing high yields of transglutaminase.

This invention relates to a process for the production of a foreign bacretory protein through the construction of a recombinant coryneform bacterium. The coryneform bacterium is transformed with an expression construct in which DNA encoding a target foreign protein pro-structure is ligated to the downstream region of DNA encoding the signal peptide domain of a coryneform bacterial protein. Following transformation with the vector, the bacterium is cultured, and the pro-peptide cleaved from useful in the food processing and pharmaceutical industries. The present sequence prepro-transglutaminase. The protein is used in an example illustrating the method of the invention. (Updated on 11-SBP-2003 to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a method for producing a foreign protein by culturing a mutant strain of a coryneform bacterium that contains an expression gene construct to secrete the foreign protein, followed by recovery of the produced foreign protein. The gene construct is obtained by ligation of a nucleic acid encoding a signal peptide domain originating from a coryneform bacterium, to downstream of a functioning promoter sequence in the coryneform bacterium and also by ligation of a nucleic acid encoding a foreign protein, to downstream of a nucleic acid sequence encoding the signal peptide. The method is useful for the production of a foreign protein which is applicable in producing e.g. industrially-useful transglutaminase and human epithelial growth factor for use in medicine, cosmetics and food processing. This sequence represents a foreign protein of the invention. (Updated on 23-OCT-2003 to

Kikuchi Y,

```
A fused protein contains amino acids 16-346 of BTG (AAQ55983) and a hydrophilic peptide at the amino terminal. Expression of DNA encoding this protein in E. coli allow large scale prodm. of BTG. An active BTG can be prepd. from the inactive fused protein inclusion body. (Updated on 10-MAR-2003 to add missing OS field.)
                                                                                                                                                                                                                                       Length:

Fatent No. 6150502

GENERAL INFORMATION:

APPLICANT: Watson, James D.

APPLICANT: Strachan, Lorna

APPLICANT: Strachan, Matthew

APPLICANT: Sleeman, Matthew

APPLICANT: Ornust, Rene

TITLE OF INVENTION: Compositions Isolated From Skin Cells

TITLE OF INVENTION: and Methods For Their Use

FILE REFERENCE: 11000.1011c1

CURRENT APPLICATION NUMBER: US/09/188,930A

CURRENT FILING DATE: 1998-11-09

NUMBER OF SEQ ID NOS: 348

SOFTMARE: FastSEQ for Windows Version 3.0
                                            APPLICANT: Dumas Milne Edwards, J.B.
APPLICANT: Johert, S.
APPLICANT: Globert, S.
TITLE OF INVENTION: ESTS and Encoded Human Proteins.

Sequence 29946, Application US/09252991A

Patent No. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J Rubenfield et al.
ATTLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS;
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILLE REFERENCE: 101196.138
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR FILING DATE: 1998-02-18
PRIOR SEQ ID NOS: 33142
SEQ ID NO 29946
Sequence 301, Application US/09312283C

Patent No. 6573095

GENERAL INFORMATION:

APPLICANT: Strachan, Lorna
APPLICANT: Steeman, Matthew
APPLICANT: Only Recensed to the strachan and better the strachan and better the strachan: Only Recensed to the strachan and better the strachan: Only Recensed to the strachan and better the of INVENTION: Compositions Isolated from Skin Cells
TITLE OF INVENTION: and Methods for Their Use
FILE REFRENCE: 11000.1011c2

CURRENT APPLICATION NUMBER: 1999-05-14

NUMBER: OF SEQ ID NOS: 425

SOFTWARE: FASESEQ for Windows Version 4.0

SEQ ID NO 301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 202

Sequence 4. Application US/09134001C

Patent No. 6380370

GENERAL INFORMATION:

APPLICANT: Lynn Doucette-Stamm et al

TITLE OF INVENTION: WUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCOCCUS

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: GTC-007

| Sequence 18, Application US/09001951
| Patent No. 6268470
| GENERAL INFORMATION:
| APPLICANT: Shyjan, Andrew W. APPLICANT: Shyjan, Andrew W. TITLE OF INVENTION: DIAGNOSIS, PREVENTION, AND TREATMENT OF NEOPLASTIC CELL TITLE OF INVENTION: DIAGNOSIS, PREVENTION AND TREATMENT OF NEOPLASTIC CELL CORRESPONDENCE 24
| CORRESPONDENCE 24 CORRESPONDENCE ADDRESS: ADDRESSE: Fish & Richardson, P.C. STREET: 225 Franklin Street
APPLICANT: Shyjan, Andrew W.

TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE
TITLE OF INVENTION: DIAGNOSIS, PREVENTION, AND TREATMENT OF NEOPLASTIC CÈLL
TITLE OF INVENTION: GROWTH AND PROLIFERATION
NUMBER OF SEQUENCES: 24
CORRESPONDENCE ADDRESS:
ADDRESSEE: Fish & Richardson, P.C.
STREET: 225 Franklin Street
CITY: Boston
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           747

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                   Sequence 2, Application US/09060854B
Patent No. 6642011
Patent No. 6642011
APPLICANT: Estell, David Aaron
TITLE OF INVENTION: Human Procease and Use of Such Protease for Pharmaceutical
TITLE OF INVENTION: Applications and for Reducing the Allergenicity of No. 6642011-H
TITLE OF INVENTION: Proceins
TITLE OF INVENTION: Proceins
FILE REFERENCE: GC532
CURRENT APPLICATION NUMBER: US/09/060,854B
NUMBER OF SEQ ID NOS: 7
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: Bamber, Bruce
APPLICANT: Bamber, Bruce
APPLICANT: Bamber, Brik
TITLE OF INVENTION: Nematode Neuromuscular Junction GABA Receptors and
TITLE OF INVENTION: Methods Related Thereto
FILE REFERENCE: 21101.000943
